**Terry Refinement & Care**  
 Floringo Terry Catalogue  
 information on handling & care

Our terry products are strictly conceived in relation to their use and the demands of our customers. For this purpose, we have developed our own specifications with regard to yarn and fabric, color and seams, treatment and finishing. This results in qualities with extreme fastness in terms of fabric, form and color. Their long life cycle renders them profitable in laundering and as leasing textile. Full grip and high comfort, lasting softness and best absorbency are assets which are highly appreciated by guests in Hotels of all categories.

No wonder, our towels and bath robes have become a brand name in 5-Star Hotels, in Spa & Wellness centers and fulfill an excellent job on Cruise liners. As promotional articles our terry products are not just expressive but generate effective and lasting sympathy.

With respect to use and market we have split our warehouse assortment in two catalogues: with articles for institutional use on the one hand and standards for wholesalers & promotional sellers on the other. You will find ideas and recommendations for custom made & refinement in a third catalogue. All catalogues contain tips for proper handling and care as well as a subject-specific terry glossary.

Please do not hesitate to ask your contact person for any questions. We would like to support you with our competence and hope you will enjoy our products.

Bernhard Egner/Johann Geisslinger  
 General Managers

# Trade & Promotion

Experience quality – terry brand with sustainable success

Our terry linen is recognized quality and a solid fundament for the market success of our customers.

Their uniqueness in terms of high comfort and long life cycle makes them a secure product for wholesalers and a valuable article for promotional professionals. Perfectly designed and sustainable in terms of production, quality and sympathy they stand out over a mass of fast paced gimmicks. They express logos beyond their pure design, with gains in the future.

Excellent materials, modern and stepless production are essential factors for our high quality standard. Subject specific competence and a sophisticated quality management add to the fact that our customers can count on a constantly high production result.

Consequently, our norms for raw materials, production and finishing go far beyond conventional standards. In a period of more than 20 years we have developed especially lasting and energy saving qualities which lead to a considerable improvement in the ecological life cycle assessment of valuable cotton yarns.

In the year 2016 we have edited our first sustainability report according to GRI (Global Reporting Initiative). Measurement and scrutinized reporting has made clear that quality and sustainability are inextricably linked with each other. Being a German company we would like to point out that fairness and a reliable 360° service performance must also be added in order to complete the chain to constant success.

You are free to choose out of a unique assortment of more than 1.000 products with towels, bath robes, mats and covers, for every taste and purpose. We present every article with informative and important details to quality. Take your chance and convince your customers with these future oriented products – they will appreciate it.

**Nachhaltigkeit**  
 ein berichtenswertes Thema bei der Floringo GmbH  
 Nachhaltigkeit bei Floringo GmbH - Info-Logo Bericht

Products according to G.O.T.S. Organic standards go beyond grey cotton yarn and encompass production chain including social norms.

Products acc. to Oeko-Tex Standard are checked with regard to the harmfulness of substances. We put emphasis on auditing by German Textile Institutes.

Companies according to DEKRA are audited according to quality management norm ISO 9001. We work with upgrade standard ISO 9001:2015

# Avantgarde

## single ply 750 gsm

Corpulent terry collection – with yarn from long staples

Washing

Reactive dyed

ProdSeclaw

Oeko-Tex

Oekotex 100

### Asset

A top product that excels by its voluminous pile and a wonderfully firm and still soft grip. Towels are from long staple yarns and produced using the most modern techniques in weaving and finishing. At home in suites of luxury hotels. Available in four shiny and warm colours.

### Quality Details

**Material:** 100 % cotton, high quality ring spun yarns with long pile

**Weight:** 750 gsm

**Dyeing:** fresh reactive colours with good washing characteristics

**Design:** three decorative stripes as border

**Finishing:** lasting seams

**Certifikates:** Oekotex Standard 100

# Microfiber

## knitted microfiber 320 gsm

Knitted microfiber towels without border

Washing

ProdSeclaw

Oeko-Tex

Oekotex 100

### Asset

Soft and well-drying. Trendy with mountaineers because of little weight. Recommended for hair stylists and cosmetic studios because polyester yarns hold off other colours.

### Quality Details

**Material:** microfiber quality, 100 % polyester

**Weight:** 320 gsm

**Dyeing:** washing resistant dispersion colours

**Design:** without border

**Finishing:** selvages on 4-sides, lasting double seams

**Certifikates:** Oekotex Standard 100

### Assortment with colours and sizes

# Kimono – 300 organic cotton single-ply velours 380 gsm

Velvety single ply velours quality – in pure organic cotton

Washing

Ring-Spun Yarn

Oeko-Tex

Oekotex 100

## Asset

Luxury Bath robe made from 100% organic cotton – velvety grip outside, soft and fluffy inside. Highly comfortable as weight is reduced due to the shorn front side but absorbency inside undiminished.

## Quality details

**Material:** 100% organic cotton

**Weight:** approx. 380 gsm

**Dyeing:** white with blue optical brightener

**Schnitt:** Unisex – for women and men

**Design:** with two put-on side pockets, belt with double loops

**Finishing:** raglan sleeves, tucked selvages, lasting seams

**Certificates:** G.O.T.S. (Global Organic Textile Standard), Oekotex Standard 100

## Assortment with colours and sizes

Kimono Size	300 S, M, L	300 XL	300 XXL
Colour	Colour name		
<input type="checkbox"/>	007 white	■	■

■ = available from stock

production with special colours is possible with a minimum quantity of 500 bath robes and 40 pieces per size

## Sizes

Back length in cm	S	M	L	XL	XXL
	120 cm	120 cm	125 cm	130 cm	140 cm

Sizes in table correspond to size after the first washings. Production measurement is therefore approx. 8–10% higher as it accounts beforehand for shrinkage through washing.

# Bio-Line

## single ply 450 gsm

Single ply terry towels with wave border – organic cotton

Washing

Ring-Spun Yarn

Reactive dyed

ProdSeclaw

### Asset

Fine and fluffy towel quality made from organic cotton. Produced according to the strong and very sustainable norms of G.O.T.S. (Global Organic Textile Standard). With attractive wave border on both towel edges.

### Quality Details

**Material:** 100 % organic cotton, high quality carded ring spun yarns

**Weight:** 450 gsm

**Dyeing:** colour intensity according to G.O.T.S.

**Design:** special wave borders on the upper and lower towel edge

**Finishing:** lasting double seams

**Certifikates:** G.O.T.S. (Global Organic Textile Standard)

### Assortment with colours and sizes

Name		Hand	Bath
Size		50 x 100 cm	70 x 140 cm
Colour	Color name		
	007 white	■	■
	902 graphite	■	■
	512 sand	■	■

■ = available from stock

production with special colours is possible with a minimum quantity of 800 bath towels

# Profi-Star Organic

## single ply 500 gsm

Single ply quality – without border – 100 % organic cotton

Washing

Ring-Spun Yarn

Oeko-Tex

Oekotex 100

### Asset

Classic hotel towel for upmarket hotels. Dense and voluminous single ply terry towel with best scores for laundries and ecological hotels: no distortion and elegant, without border.

### Quality details

**Material:** 100 % organic cotton, high quality carded ring spun yarns

**Weight:** 500 gsm

**Dyeing:** white with blue optical brightener

**Design:** plain, no border, upper and lower towel edges with rayon stripes

**Finishing:** lasting double seams

**Certificates:** G.O.T.S. (Global Organic Textile Standard), Oekotex Standard 100

### Assortment with colours and sizes

Profi-Star Size	Hand 50 x 100 cm	Bath 70 x 140 cm	Guest 40 x 50 cm
Colour	Colour name		
<input type="checkbox"/>	007 white	■	■

■ = available from stock

production with special colours is possible with a minimum quantity of 600 bath towels

# Spa & Sport

---

Have yourself inspired by special products for sport, sauna and wellness – additionally to our standard towel series. They are also ideal sources for customized terry products.

# Sauna Kilt Twin-Star

## cotton/polyester 320 gsm

Velvety polyester-cotton quality – with hook and loop fastener

Washing

Ring-Spun Yarn

Reactive dyed

ProdSeclaw

Oeko-Tex

Oekotex 100

### Asset

Soft sauna kilt, with velvety polyester outside and absorbing cotton yarns inside. Comfortable and useful, with pocket and flexible adjustment of width – thanks to elastic band and Velcro-fastener. Persistent manufacture and generous cut – long for women, short for men.

### Quality details

**Material:** 40 % cotton/60 % polyester

**Weight:** approx. 320 gsm

**Dyeing:** double-dyed quality

**Design:** with one put-on pocket

**Finishing:** with elastic band and Velcro-fastener

**Certificates:** Oekotex Standard 100

### Assortment with colours and sizes

	280 raspberry	■	■

■ = available from stock

production with special colours is possible with a minimum quantity of 250 pieces

# Hamam towel

## single ply 350 gsm – one sided woven

Hamam towels with coloured stripes – with (or without) knotted fringes

Washing

Ring-Spun Yarn

Vat Dyed

ProdSeclaw

Oeko-Tex

Oekotex 100

Neutral Bleached

### Asset

Hamam – or Pestemal towels provide oriental flair. With flat front side and soft pile on backside they are both: 'Hamam' and useful towel. Woven as one piece, with sewn border stripes and vat-dyed colors they qualify excellently for intensive use. As promotional item we recommend them with knotted fringes.

### Quality details

**Material:** one sided weaving, 100 % high quality ring spun yarn  
**Weight:** 350 gsm  
**Size:** 90 x 150 cm  
**Dyeing:** white neutrally bleached, vat-dyeing for high color fastness  
**Design:** coloured polyester stripes in sewing yarn, with (or without) knotted fringes at the edges  
**Certificates:** Oeko-Tex Standard 100

### Assortment with colours and sizes

Name		with fringes	without fringes
Size		90 x 150 cm	90 x 150 cm
Colour	Colour name		
	000 n. white	■	■
	505 sand	■	■

■ = available from stock  
 production with special colours is possible with a minimum quantity of 300 pieces

# Sauna sheet

## two ply 520 gsm

Fine two ply terry quality with high/low woven design

Washing

Ring-Spun Yarn

Vat Dyed

ProdSeclaw

Oeko-Tex

Oekotex 100

Neutral Bleached

### Assets

Professional sauna towel with full pile and diverse sides. High/low woven design on front side is animating on the skin, flat pile on back side is a token for excellent absorbency.

### Quality details

**Material:** 100 % cotton, high quality carded ring spun yarns

**Weight:** 520 gsm

**Dyeing:** white – neutrally bleached, vat-dyeing for high color fastness

**Design:** low woven vertical stripes

**Finishing:** lasting double seams

**Certificates:** Oekotex Standard 100

# Gift Packings

---

underline the validity of high quality products –  
at best in customized and informative fashion.  
We are happy to advice you to manifold variants.

# Gift packing

Characteristic gift packing – for special occasions

## Asset

Gift packages which give your present a distinctive touch. Depending on occasion and budget we recommend various kinds.

## Candy packing – neat

**Use:** every size from guest to bath towel  
**Material:** transparent foil with two bows  
**Size:** adjusted to towel  
**Handling:** Towel is rolled. Foil is wrapped around and adhered with plaster

## Gift box – prestigious

**Use:** for every article and size  
**Material:** Quadratic box in white from laminated cardboard material. Transparent window on front side  
**Size:** XS–XL: from 5 to 13 cm height  
**Appearance:** products laid in properly – with logo visible in window  
**Special production:** individual gift boxes with 1.000 pcs. and more – please ask in case.

## Package band – informative

**Use:** for all sizes of towels and bath robes  
**Material:** Solid paper – laminated and printed  
**Size:** adjusted to article  
**Appearance:** towels are rolled and bath robes folded, banderole put around and pasted on the back side  
**Minimum quantity:** on request

## Poly bag – functional

**Use:** for all sizes of towels and bath robes  
**Material:** transparent bag in polyethylene  
**Size:** adjusted to article  
**Appearance:** products will be laid that logo is visible on front side

## Extra packing service – optional

On request we add greeting cards and/or further gift articles into gift boxes, bags etc.

# Care tips

## Important information on adequate washing and drying

### Washing temperature – follow label instructions

Use exactly the washing temperature which you will find on your product label. Do not wash with lower temperature as then colors may faint. Sufficient temperature enhances color fastness. Regarding first washing, also colored qualities should be washed with 95 °C ( 203 °F), in order to stabilize color in the cotton yarn.

### Colored terry cloth – wash 3 x separately, without optical brightener

Please wash dark and intense colors three times separately. Colored qualities should be washed with detergents which contain no optical brighteners. Optical brighteners may cause stained colors. For dosage please follow the instructions of your washing detergent producer.

### White terry linen – use laundry detergent (with optical brightener)

White linen should be washed with laundry detergents. They contain optical brighteners which create a shiny white color. For proper dosage please follow instructions of producers.

### Twin Star – single-origin in laundry

Please do not mix Twin-Star quality with other cotton terry qualities. Otherwise you will not profit from its energy saving effect in drying.

### Avoid fabric softeners – and keep towels absorbent

Fabric softeners lay themselves onto the texture and have a repellent impact on water absorbency of terry linen. They may also enhance fluffs.

### Fill washing drum with at least 50% – dose detergent properly

Sufficient loading is important. With too little filling terry cloth beats against the drum, which increases the development of fluffs. Exact dosage of detergent is also important. Too little as well as too much detergent reduce brightness of colors and stiffen your terry linen.

### Dry at best with tumbler – and keep towels fluffy

With tumblers, terry cloth becomes pleasantly soft and will be freed from fluffs. Please check that temperature of tumbler is not excessive. Over-dried cotton yarn becomes stiff and deform. Drying terry linen outside or over radiators is not advisable. It makes terry cloth also stiff.

### Additional info for polyester and Twin-Star

Qualities from and with polyester start to smelt at a temperature of 230 °C (446 °F). Yarns shrink to knots and surface becomes rough. Please take care that you keep the tumbler heat in respective limits. Do not wash mixed polyester fabrics together with heavy cotton qualities as this may also result in overheating the polyester yarn.

## Be aware of typical characteristics and avoid damages

### Fluffs – only in first washings

Cotton towels with fluffy pile excel in water absorbency, but have a natural disposition for fluffs. Do not worry because of fluffs as they will be washed out after the first washings. They will be low when you wash your cotton towel adequately.

### Shrinkage – a natural habit of terry linen

Every terry linen shrinks after the first washings. Due to high quality yarn and professional textures our terry linen does not shrink more than 7–10 % and holds proper form for a long time.

### Loose threads – just cut them off

Terry linen has a texture with strong ground and soft loops on the surface. During production it can happen that towels are left with a loose loop or thread. Please do not pull them, just cut them off. Neither texture nor seam will be damaged.

### Lay Velcro® fasteners properly – wash zippers and hooks separately

Hooks, zippers and loop fasteners can cause grave damages on your terry article. Therefore, do not wash terry linen together with zippers and hooks. Please, position sides of Velcro® fasteners on top of each other.

### Unload drummer with care – do not pull with force

Wet terry linen is heavy, wet terry texture is less stable than in dry condition. Do not forcibly pull bath robe at sleeves and belts as this may cause damages at seam and texture.

### Attention with chlorine – use only resistant dyestuff

Chlorine can change color of dyestuff and may even destroy texture of terry linen. Impact of chlorine is very strong in combination with heat, and consequently during washing and drying. Follow instructions of producers for the adequate dosage of chlorine.

### Avoid chlorine with reactive colours

Terry linen as home textile is often dyed with reactive colors. They have very good washing characteristics but react badly when they get in contact with chlorine. Please take into account that chlorine may also be found in bleaching and disinfecting agents as well as in bathroom cleaners.

### Use vat dyed colors with chlorine – follow instructions for temperature and dosage

For institutional terry linen we recommend vat dyed colors, known as Indanthrene dyestuff. They are resistant against chlorine within the limits of recommended dosage and temperature. Please follow respective instructions of producer carefully.

### Impurification with oil

We recommend to wash the article first with cold water and use an adequate detergent for purification afterwards. Water temperatures over 30 °C (86 °F) would fix the oil, e.g. massage oil, even more and will damage the quality for the time ahead.

# Terry-Abc

## Yarn

**Combed cotton yarn** refers to the fact that there is technically an additional procedure between carding and spinning: A needled roller sorts out short yarns and creates a yarn band (pile) in equal thickness and direction.

**Carded ring spun yarn** are ideally suited for lasting and cozy terry qualities: ring spun yarn is twisted in high speed which results in thin, soft, tear-proof and abrasion-resistant yarns. Before spinning, cotton yarn is carded i.e. fibers are loosely exposed and brought into a parallel structure. Because of these characteristics we recommend to produce cotton terry qualities with carded ring spun yarn in pile, warp and weft. Average life span of this quality is well over 30% to fabrics with OE-yarns.

**Microfiber** – extremely thin fiber from polyester. We produce knitted terry qualities from pure microfiber which is highly recommended in the cosmetic sector. Like any polyester yarn, microfiber has an extreme color fastness and does not take up other colors. Mixed fabrics from microfiber and cotton can optimize the characteristics of terry qualities in manifold ways – see polyester and Twin-Star quality.

**OE-Open-end-yarns** are produced by rotor spinning machines which work best for stiffer fibers with a low tendency for curling. OE-yarn has a harder grip than ring spun yarn and has lower stability. In terry qualities, OE-yarn can be used in weft. It is not suited for warp and pile as far as it concerns a high quality terry product.

**Polyester** – an often misunderstood fiber which deserves a clarification: high quality polyester fibers can optimize the characteristics of terry fabrics, especially for institutional use. Most important are factors like softness, tear-proof, elasticity and energy saving.

**Premium-Soft-Yarn** is a wonderfully pleasant yarn out of combed cotton, taken from piles in long staples. Extreme softness, high volume and excellent absorbency are its properties. Premium-soft yarn is ideal for institutional bath robes which stay soft over the whole life span.

## Fabric

**Well soft or poly soft** is polyester which is pushed up. Covers in well soft quality are extremely fluffy and warming. As knitted fabric and in proper confection, they are tear proof and an easy-care product.

**Twin-Star quality** is an innovative fabric from Floringo, ideally to be used for the confection of bath robe and terry articles for children. Front side of this material is pure microfiber, reverse

side is pure cotton. Due to the microfiber part, Twin-Star stays soft, has little shrinkage and is energy-saving in tumbler drying. With pure cotton inside it is well water absorbing and gives a natural feeling to the skin. In summary, Twin-Star quality combines noble comfort with an excellent energy and life cycle assessment.

**Velours** means that terry qualities are shorn and spliced on the front side. Effect is that they get a shiny appearance and a velvety grip. Usually, cotton terry qualities with pile in single or double ply are used for processing into velour. Back side should be in cotton quality in order to be absorbent.

**Single ply** defines a terry quality with one yarn to be used for each loop. Pile with this kind of loops is very soft.

**Knitted terry** qualities are not woven on dobby or jacquard looms but on special knitting machines. The most important advantage of this fabric is that threads cannot be pulled. Due to the structure of the fabric it is not possible to move the threads. Consequently, it is not possible to weave motives in knitted quality.

**Double ply** defines a terry quality with two yarns which are twisted into each other for each loop. Pile in double quality is dense and more equally bent than single ply quality. Grip is more solid. In the same way as single ply, it is excellently water absorbing.

## Colors

**Vat-dyed colors** (known as Indanthrene) are best choice for cotton terry qualities in institutional use. Better known under their trademark “Indanthrene” this dyestuff has untested scores with regard to fastness in terms of light, sweat and heat. Vat-dyed colors are boil proof. Their most remarkable asset is their resistance against chlorine (up to limited degrees – see care tips). The dyeing process is technically challenging. By nature of dyestuff, tolerance for color must be higher than for reactive colors. In comparison with them, impression of color is less shiny.

**Reactive colors** combine very good washing characteristics with strong and shiny color impression. For this reason, they are ideal for commercial and promotional products i.e. for the use at home. As they are not resistant against chlorine their use in Hotels and Spa must be specifically checked.

## Finishing

**AIRCO®** is the trademark for a patented and protecting hot-air-finishing. Besides reducing fluffs it enhances the volume of the pile and leads to full and fluffy grip before the first washings.

**Hydrophilic** finishing means that terry qualities become especially absorbent for water. It is applied to high qualities from ring spun yarns and does valuable service also when intensive colors are used.

**Turbang®** Finishing is a different term, but technically similar to AIRCO® – see above.

## Seams and edges

**Double hemming** refers to the seams at the long sides of towels. Edges are folded twice and then hemmed with a double chain stitch. Solid seams are important in laundering and indispensable for a long life span: wet towels are heavy and beat against drummer and tumbler, a fact which is enhanced by the big loads of industrial units.

**Chain stitch** is an important version for the stitching of towels. Basically, its structure is like a chain of loops which make a stable stitch but keep the cut edge elastic. Our automatic stitching machines carry out a dense double chain stitch with a minimum of 3,5 stitches per cm.

**Overlock stitching** has generally the function to combine textile components and to secure them at the edges. Overlocked seams are common for flat fabrics but are not optimal for fluffy terry qualities. We avoid cut edges wherever possible, in order to reduce overlock stitching to the necessary minimum.

**Piping** – is clean and decorative trimming at the edges. At bath robes, pipings are applied around collar and down to the height of belt, at the end of sleeves and side bags. They are also helpful for the easy sorting in laundering. Piping is also used for covers and hooded children towels. Before, cut edges are secured with a whipped seam.

**Clean hemming** – most important for bath robes, especially at long sides. Cut edges are first secured by means of a whipped seam, then folded to the side and finally hemmed together with the underlying fabric. Clean hemming leads to a closely applied and stable, clean and highly comfortable seam.

**Backstitch and lockstitch** are basically identical. Both refer to a stitching process where the needle goes back and force with the possibility to close small gaps. Backstitches lead to a very stable seam which we apply at the short sides of our towels. With regard to embroideries, it is especially used for fine shapes and outlines.

## Cutaway models – bath robes

**Full-body-cut** means that the body-part (trunk) of the bath robe consists solely of one piece, and has therefore no side seam.

**Hooded bath robes** are made in a way that capuche and collar are from one piece. Hooded bath robes are ideal for outdoor sauna areas, popular with wholesalers and an ideal cut as bath robes for children.

**Kimono** derives from the Japanese style and means that collar has no cuff. Kimono bath robes recommend themselves as easy handling and space saving models in institutional use.

**Raglan cut** means that sleeves and shoulder are one part. Consequently, the sleeve starts at the collar and covers the shoulder part. Bath robes in Raglan cut are easy to dress on and fit perfectly on breast and shoulder. The term refers to the English General Lord Raglan who lost his arm in a battle and is supposed to have invented this cut exactly for this purpose.

**Shawl collar** means that collar and lapel are one piece. Similar to a shawl, collar and cuff go around the neck, converge at the breast and go down until height of belt. As upgraded version, we recommend to refine the shawl collar with piping and/or well soft trimming.
